

1010.25 - Smarts

If you ever wanted to know how it'd feel to give yourself  
head, suck on your pinkie

I don't think anyone is truly smart. and I don't say that in a<sup>\*</sup>  
"except me" way. I am anyone. We're all both special and

.. Albert Einstein, Nikola Tesla, even I may say people are smart  
but with time and training your mind anyone can get that  
level of knowledge - but it's finite. Obviously nobody knows  
everything as it's not even possible, (In my mind, not  
even to 'highest life forms' (more intelligent aliens?) or someone's  
interpretation of a god. (well, to the word 'interpretation'.  
clearly in their perspective the 'god' knows everything but I'm  
going off track.) as you're reading this and I'm writing, you  
might guess things like that my claim comes from  
my lack of.. smarts. You aren't smarter than me. I  
am not smarter than you. Do you truly know <sup>anything</sup>  
if you really think about it? Humans are intelligent  
life but do any of us truly know <sup>anything</sup> about  
<sup>anything</sup>? Maybe you know a lot about your  
favorite show or band, but beyond that, do you  
truly know your best friend? In their mind? Maybe  
you have a guess, but do you know how the world  
looks in their perspective? Do you know what they  
physically see? Wondered how they're scared of  
cats but find spiders cute? - what if their places  
are swapped - where in their eyes when you see your  
idea of a cat, then see your idea of a spider  
and vice-versa? There are very - 'surface level'  
questions, but you should put some time into  
thinking. Look in the sky, you couldn't name the  
constellations you see, ask an astronomer and they  
could tell you. Look through a telescope and ask him

~ line \* - (test a bit more) 15 is it all

2

what an 'undisclosed'.. uncovered or discovered? SPARK  
you saw was, he wont know? ~~for~~

~~to do a bit more with the... that dont~~

~~share with... R1: he wont R2: ... with~~

~~probably to the... I know... how ask a scientist~~

now-why we need sleep: a question as easy as that.. he  
wont have a positive answer- he may be able to tell you how  
it helps but not why-google it! :) now back to your friend, you

could ask.. 'describe a cats appearance to me, Wallace!' he  
may say.. 'well.. 4 legs, long tail, pointy ears.. Do you  
think im a retina?' and to that i say.. well thats not 8

legs and 10 eyes. Aof im not even smart writing a kinder  
level 'essay'! ..for lack of a better word. But to perspec-

-tives again, how your brain sees a cat "maybe not physically  
this time..\*" is how his brain perceives a spider.. perhaps i

should have used color rather than animals! wouldnt have  
made me look as clueless and maybe saved you some

time.. but snap were back now! Did i throw you off with  
that rant? Did you think about all these things we never

know? Can you or- would you be able to respond correctly?  
Could you to more questions? Could someone with an IQ

higher than average & to millions → billions? Not all questions  
have to be complicated. Could be how many teeth you

have. Whats a #12 from McDonalds. a lot of people, maybe  
\* you, could answer that. Do you feel smart? Do you

exist? Do you know if your answer is correct? How?  
Because you can see your fingers right now and

count them? Because you have a mind, consciousness,  
awareness, opinions.. you have them all to some

extent. Its all limited in everyone. But still exists :) Do  
you know how to perceive or comprehend things unseeable  
to humans? The human eyes can only see so much.

-humans can only / have only comprehend 4% of the universe

3'

Theres a lot recorded, that you can look up on the internet right now, but since were human.. with again, finite ability.. how could we see or be aware of things outside of us, and write about, have any knowledge or ideas about or even begin to slightly grasp..

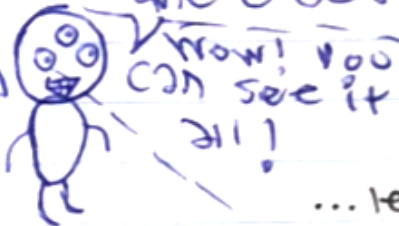

Normal person

You couldn't see it even if you try!

a lot of people are very fascinated by the idea of a third eye. I havent researched nearly as much as some people! or participated in.. stuff with it but heres my 'understanding'

I cracked the code!

enlightened guy!

but this is more of a spiritual thing. It allows you to see beyond average vision. And it could be superhuman and see this stuff. But again. I dont actively

... lets say research (again) this, tell me your thoughts. But with a third eye, could i ask how many kernels of korn was in my morning shit and it hear a correct answer? Perhaps... ☹

Think of the 4th dimension. Maybe you could hear or read an explanation of it. But can you picture it? Could you physically make a model of it? 3D model? ooo its 3 not 4! read the note at the top - even if you became the smartest human ever, in the big ass universe, you'd still have a 96% you'd never be able to comprehend in your little human brain! its ok, maybe aliens only know 3%.

4

So, remember the beginning? It wasn't too long ago. Yeah, I call people like midact loving hawking (just joking..) & smart, I just needed a cool title, start 😊 but well I'll still say nobody's "truly" smart because saying, "None" of us know "nothing"! Proven by my 3rd grade level of thinking you read all in this (I assume) PDF. I'll bet you thought of this all when you were 10. But I'm not a strong thinker right! 😊
